

I built a tool to
research & score
target accounts
for free, at scale.

Swipe to see how it works →

github.com/NatesVibeCode/account-fleet

All you need is 2 free accounts.

Then plug it into whatever harness or chat tool you already use.

1. Free OpenCode Account

LOCAL ENGINE

Runs your open-source coding agent locally. Orchestrates extraction with **zero seat licenses**.

2. Free OpenRouter Account

\$0 MODEL ROUTING

Routes prompts to free-tier cloud models. **Zero token costs**, zero spend, and zero credit card needed.

3. Use Whatever Harness You Want

YOUR WORKSPACE

Works out of the box in **Claude Desktop**, **Cursor**, **Codex**, **Grokbots**, **Antigravity**, or any MCP-compatible agent.

✓ Add as a local MCP tool in 1 click — then just drag & drop your CSV.

\$0 COST
No Credit Card

NO LOCK-IN
Any Agent / Chat

FULL OWNERSHIP
Local SQLite DB

Accounts scored, sorted, and backed by proof.

The top 25 accounts ranked by ICP fit — with exact evidence of technical gaps.

ranked_target_accounts.csv				Scored & sorted by fit • Top 5 of 25 shown
RANK	ACCOUNT	SCORE	GROUNDED TECHNICAL EVIDENCE	
#1	stripe.com	98	“lead migration off legacy v1 billing pipeline to Kafka”	
#2	hyper_ai	94	“hitting latency limits at 50k QPS on Postgres cluster”	
#3	pinecone.io	91	“scaling vector search across multi-tenant clusters”	
#4	posthog.com	87	“optimizing ClickHouse to ingest 2B+ daily analytics events”	
#5	supabase.com	84	“building globally distributed Edge Functions replication”	

Every row carries a character-exact source quote

Reps never reach out cold with generic assumptions — they cite verified bottlenecks.

RANKED PIPELINE
Top 25 Accounts

ZERO HALLUCINATIONS
Exact Source Quotes

ACTIONABLE CSV
Direct CRM Export

The 4-Layer Filter.

From 1,000 down to the top 25.

L1

Firmographic ICP Fit

Scans positioning & homepages. Filters out wrong-fit companies instantly.

1,000 → 600

L2

Tech Stack & Architecture

Scans developer docs & changelogs. Extracts exact infrastructure stack.

600 → 150

L3

Hiring & Budget Signals

Scans active engineering job posts for urgent initiatives and tooling gaps.

150 → 50

L4

Fit Scoring & Verbatim Evidence

Scores survivors 0–100 and clips character-exact quotes of technical gaps.

50 → 25

Why compounding works so well

You only spend model compute on accounts that proved fit. Zero wasted effort on dead leads.

Don't trust AI summaries.

Require exact quotes.

1. RAW SOURCE INGESTION

PUBLIC WEB PAGE / MARKDOWN

“We are looking for a Staff Engineer to join our Platform team. In this role, you will be responsible for **leading the migration of our legacy billing service to Apache Kafka** and modernizing our distributed streaming architecture.”

Free-fleet fetches raw unedited HTML/markdown from public URLs and indexes it in local SQLite before extraction.

2. EXACT SUBSTRING VERIFICATION GATE

assert quote in raw_text

CLAIM	Legacy billing migration to Kafka
EXACT QUOTE	<i>“leading the migration of our legacy billing service to Apache Kafka”</i>
BYTE OFFSETS	chars 142 : 211 • verified match at line 1

If the model hallucinates or paraphrases a single character, the substring match fails and the record is **instantly discarded**. Zero hallucinated claims enter your CSV.

Deterministic code replaces model trust

Python code verifies the quote against raw source text before writing any row to SQLite.

EXACT MATCH
quote in raw_text

AUDIT TRAIL
